We moved into our new house this past summer. During the move we have continued to use the garbage cans we had at the old house. Now I have a lot of new plants and herbs in the yard that need to be planted, but I am afraid to plant them in the garden because they are probably dirty and full of bugs. How can I find out how dirty they are before planting? If they are dirty, can I wash them before planting? A. You can find out how dirty they are by tossing them into the garbage can, then adding more soil to the bottom of the container. If you can see the dirt floating on the top of the soil, the plant is probably clean. If it looks too dirty, then you can wash it thoroughly before planting, or you could wait and plant it after the weeds have grown over it. As for bugs, you may want to keep a container of soapy water in your garden shed, so you can spray the plants to get rid of any pests. If you live in a rural area where it is easy to find predatory insects, you may want to just wait until the plants have grown. Contact Us Need to know more about what we can do for you?
