History References External links Category:Computer-related introductions in 2016 Category:Word add-insQ: Linux Kernel sources not found Can anyone help with the following. I'm trying to build my own kernel in Debian 6.3 but I keep getting the same error. My kernel version is 3.2.11-1. I'm trying to build with the following command: `sudo apt-get install git build-essential cmake git clone cd linux/debian git clone cd uClibc mkdir -p /home/debian/crosstool-ng/bin make crosstool-ng-native` But I keep getting the following error: In file included from `/home/debian/crosstool-ng/bin/crosstool-ng-native-build:34: /home/debian/crosstool-ng/include/crosstool/crosstool.h:90:32: fatal error: linux/build.h: No such file or directory compilation terminated. Makefile:17: recipe for target '/home/debian/crosstool-ng/src/crosstool-ng/libarch/armel_elf_asm.o' failed A: The error message looks to be indicating that you've unmerged a branch of uClibc that contained build.h. You can get it to build by merging in the upstream master branch instead, and rebuilding everything. At the top level of the uClibc repo you'll see a branch named uclibc.master, which is the branch with the code in it you want. To merge it, you can do git checkout uclibc.master git merge master cd linux git checkout master git merge uclibc.master Hopefully this will get you up and running. An exploration of the construct validity of the Strengths and Difficulties`
