Hyperkalemia-induced ventricular fibrillation in a newborn with Bardet-Biedl syndrome. We report a case of a preterm newborn with Bardet-Biedl syndrome who developed severe hyperkalemia. This was accompanied by cardioinhibitory responses, a reduction in left ventricular compliance and complete electrical asystole. During the episode, sustained and nonsustained ventricular fibrillation occurred. Extensive and appropriate treatment was used. The present case indicates that patients with Bardet-Biedl syndrome are at risk for the development of hyperkalemia with potentially fatal ventricular arrhythmias and a low cardiac output. The authors stress the need to be aware of this possible complication in order to administer appropriate treatment. Q: Does the Banach-Tarski paradox imply there is no set of the cardinality of continuum? The question is in the title. The set of

The Standard Model of particle physics is a finely tuned description of our universe, and has been so for decades. The standard model is a vast edifice built from a smaller framework of theoretical particles with their corresponding interactions. These particles, according to standard model physics, are the basic units of matter and energy in the Universe. Everything is made of smaller particles and our universe is made up of them. In this article I will explain the differences between general relativity and the Standard Model of particle physics.
