Blood pressure recovery with age. In. Positive linear correlation. Eight groups each of 6 to 80-year-old subjects were studied in their recovery from an occlusion of 2 mmHg below systolic blood pressure (BP) for 2 min followed by a gradual respiration of pressure at 3 mmHg increments to the baseline pressure. The correlation between the percent BP increase in the first minute of the recovery period and the age of the subjects was significant (P less than 0.05) for each of the 8 groups. There was no correlation between the age of the subjects and the percentage increase in BP in the second minute of the recovery. We conclude that the recovery of BP after a critical decrease in pressure is delayed in the elderly. NEW DELHI: The National Security Council (NSC) on Monday approved using cyber operatives against attackers on UN networks, cyber security firm Mandiant said on Tuesday. The New York-based firm said the 16 September approval order on this involves "countering cyber attacks on UN systems". The NSC directive refers to Mandiant's successful counteroffensive cyber capabilities against the Chinese military (CPLM) threat at the United Nations' UN New York World Headquarters, which Mandiant said.
